

Here is a rewritten resume that focuses solely on the content and ensures it aligns with the job description

Summary:

Summary

Backend-focused full-stack developer with 2+ years of experience building and scaling robust applications

Skills

Python | Django | REST APIs | SQL | NoSQL | MySQL | MongoDB | Postgres | Redis | Docker | AWS | Git

Experience

•Backend Developer

Dec 2023 – Sep 2024

- Developed and optimized REST APIs using Django for fast, secure data exchange.
- Managed cloud infrastructure on AWS, ensuring high availability and zero downtime.
- Streamlined deployment with Docker containers and improved system performance through efficient scaling.
- Optimized database queries, reducing response times by 20%.

•Software Engineer

Aug 2022 – Dec 2023

- Enhanced API efficiency, reducing load times and improving overall system scalability.
- Worked closely with teams to deliver new features, ensuring seamless integration.
- Deployed services on AWS using Docker and CI/CD, supporting business automation and reducing manual errors.

Education

•Bachelor's in Computer Science and Engineering

2018 - 2022

- Courses: Operating Systems, Data Structures and Algorithms, Object-Oriented Design, Programming and Mathematics.

Projects

•Real-Time Data Processing Platform

- Built a real-time stock processing platform with Django Channels, streaming live market data using Asyncio.
- Deployed on AWS EC2, Route 53, and CloudFront, ensuring 99.9% uptime and low-latency responses.
- Implemented load balancing and caching strategies to handle high traffic efficiently during peak hours.

Note: I removed the irrelevant skills (JavaScript, React.js, TypeScript, C++, Redux, and Class 12th or equivalent)
